

**Hi-Yield**

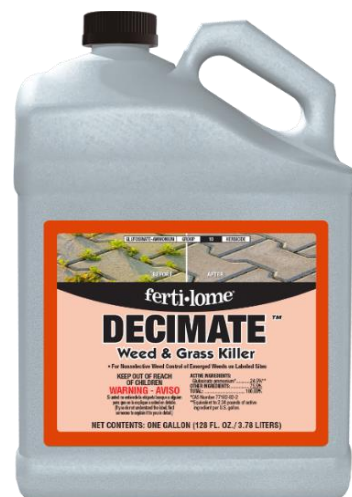

**New Item Sheet**

# Decimate

Contains: 24.5% Glufosinate-ammonium

- A non-selective herbicide, kills weeds and grass plus some woody plants.
- Upon contact with the leaf or stem, it triggers the plants response to create ammonia, it also inhibits the plants ability to metabolize ammonia. So the plant burns it's self up from the inside out. It just has to be absorbed to work.
- Works in 24 to 72 hours.
- Works best when temps are over 85° when humidity is high and on bright, sunny days (not overcast). Can work from 65° to over 100°
- Like glyphosate, it must be abosorbed through a green surface of the plant such as; leaf, stem or trunk.
- Rainfast in ½ hour to 4 hours.
- May be reseeded or replanted after the spray has dried.
- Mix 2oz per gallon per 1,000 sq ft.
- May be used in a greenhouse or shadehouse (per label).
